1.0 DESCRIPTION OF PROGRAM BRIBNT

The "Intermediate Bent Graphics" program generates the following sections:

- A. Plan view of cap
- B. Elevation view of bent
- C. Side elevation view of footing (If requested)
- D. Cross section views of cap
- E. Cross section view of column
- F. Pile layout (If required)
- G. Quantities table
- H. Elevation Table (If required)

2.0 INPUT DESCRIPTION OF PROGRAM BRIBNT

The input file should be created in node CCC.

The input data cards MUST be in the following order:

- 1) "0" - data - comments/description
- 2) "1" - data - cap dimension data
- 3) "2" - data - cap step distances
- 4) "3" - data - cap step elevations
- 5) "4" - data - centerline beam distances
- 6) "5" - data - column data
- 7) "6" - data - footing data
- 8) "7" - data - bottom of footing elevations

A. INDENTIFICATION (0 in cc 1)

1.) IDENTIFICATIONS AND COMMENTS (cc 3-79)

The identification consists of one line of input data containing pertinent identifying remarks.

B. CAP DIMENSION DATA (1 in cc 1)

The number one (1) in card column one is for identification of the cap dimension data.

1.) SCA (cc 4)

Form: x

Enter the scale of the drawing. Choose from the following (No Default) :

TYPE	SCALE SIZE
-----	-----
1	1/2 IN/FT
2	3/8 IN/FT
3	1/4 IN/FT

2.) NB (cc 5-6)

Form: xx

Enter the number of bents that this program will represent. All the bents represented MUST have the identical structural dimensions. Only the elevations for the cap and the footings may vary from bent to bent (No Default).

3.) SYM (cc 8)

Form: x

Enter the number 1 if the bent is unsymmetrical. The default is that the bent is symmetrical. If the bent is unsymmetrical then the program will place the cap steel across the entire cap length.

4.) LA (cc 10)

Form: x

Enter the number 1 if the plot will be looking back at the bent. The default is that the plot will be looking ahead.

B. CAP DIMENSION DATA CONT.

5.) BRG (cc 12)

Form: x

Enter the number 1 if there is to be a dowel bar hole at the center of bearing. Enter the number 2 if there are to be two anchor bolt holes at the center of bearing. The default is that no holes will be placed in the beam bearing area.

6.) BRDIST (cc 13-17)

Form: xx.xxx feet

Enter the distance from the center of the bent to the center of the bearing in feet (No Default). The distance is measured perpendicular to the centerline of cap.

7.) BCAP (cc 18-22)

Form: xx.xxx feet

Enter the width of the cap in feet (No Default).

8.) DCAP (cc 23-27)

Form: xx.xxx feet

Enter the depth of the cap in feet (No Default).

9.) LCAP 16 (cc 28-32, 33-37, 38-42, 43-47, 48-52, 53-57)

Form: xx.xxx feet

Enter the lengths of the cantilever/cap portions of the bent in feet. The length is from the centerline of the adjacent column to the end of the cantilever or centerline of the other adjacent column (No Default).

C. CAP STEP DISTANCES (2 in cc 1)

The number two (2) in card column one is for identification of the Cap Step Distance Data. There are two lines of input for this data. The first line of data is for the back part of the bent and the second line of data is for the front part of the bent.

1.) P (cc 3)

Form: x

Enter the number 1 in the second line of data if the ahead cap step distances are to be the same as the back cap step distances. This input is not used in the first line of data.

2.) NS (cc 4-5)

Form: xx

Enter the number of steps (No Default).

3.) CDIST 114 (cc 6-10, 11-15, 16-20, 21-25, 26-30,
31-35, 36-40, 41-45, 46-50, 51-55,
56-60, 61-65, 66-70, 71-75)

Form: xx.xxx feet

Enter the Cap Step Distances for each step in feet. For example CDIST 1 is the distance from the left edge of the cap to beginning of the second step. CDIST 2 is the distance from where DIST 1 ends to where CDIST 3 begins.

D. CAP STEP ELEVATIONS (3 in cc 1)

The number three (3) in card column one is for identification of the Cap Step Elevation Data. There are two lines of input for each Intermediate bent that is to be represented. The first line of data is for the back part of the bent and the second line of data is for the front part of the bent.

- 1.) BN (cc 3-4) Form: xx
Enter the bent number for which the cap elevations are to be entered. This input is only needed for the first line of data for each bent (No Default). This input controls the middle digit of the bar numbers.

- 2.) P (cc 5) Form: x
For each bent represented enter the number 1 in the second line of the Cap Step Elevation data if the ahead cap step elevations are to be the same as the back cap step distances. This input is not used in the first line of data (No Default).

- 3.) LEFT (cc 6-11) Form: xxxx.xx
For each bent represented enter the elevation of the left bottom corner of the cap in the first line of the Cap Step Elevation data.

- 4.) RIGHT (cc 12-17) Form: xxxx.xx
For each bent represented enter the elevation of the right bottom corner of the cap in the first line of the Cap Step Elevation data.

- 5.) STEP 110 (cc 18-23, 24-29, 30-35, 36-41, 42-47,
48-53, 54-59, 60-65, 66-71, 72-77)
STEP 1114 (cc 18-23, 24-29, 30-35, 36-41)
Form: xxxx.xx
For each bent represented enter the Cap Step Elevations. If there are more than 10 steps then an additional line of input is required with the BN, P, LEFT and RIGHT codes left blank.

E. BEARING DISTANCES (4 in cc 1)

The number four (4) in card column one is for identification of the Cap Bearing Distance Data. There are two lines of input for this data. The first line of data is for the back part of the bent and the second line of data is for the front part of the bent.

1.) P (cc 3)

Form: x

Enter the number 1 in the second line of data if the ahead cap bearing distances are to be the same as the back bearing step distances. This input is not used in the first line of data.

2.) ANG (cc 4-6)

Form: xxx Degrees

Enter the angle that closely represents the skew of the beams to the bent. The angle is measured counterclockwise from the center line of the cap to the center line of the beams. The angle will start on the left side of the bearing for the back part of the bent and on the right side of the bearing for the front part of the bent. The default is 90 degrees for both the back of the bent and the front of the bent. See the bent illustration on page 10 for further explanation.

3.) BDIST 114 (cc 7-11, 12-16, 17-21, 22-26, 27-31,
32-36, 37-41, 42-46, 47-51, 52-56,
57-61, 62-66, 67-71, 72-76)

Form: xx.xxx feet

Enter the Cap Bearing Distances for each Bearing in feet measured along the centerline of the cap. For example BDIST 1 is the distance from the left edge of the cap to the first bearing. BDIST 2 is the distance from the first bearing to the second bearing (No Default).

F. COLUMN DATA (5 in cc 1)

The number five (5) in card column one is for identification of the Column Data.

1.) NCOL (cc 3-4)

Form: xx

Enter the number of columns in the intermediate bent (No Default).

2.) B FACE (cc 5-9)

Form: xx.xxx feet

Enter the width of the column perpendicular to the pier in feet (No Default).

3.) D FACE (cc 10-14)

Form: xx.xxx feet

Enter the width of the column parallel to the pier in feet (No Default).

F. COLUMN DATA CONT.

- 4.) BAR (cc 15-16) Form: xx
Enter the main reinforcing bar size in the column
(No Default).
- 5.) NB (cc 17-18) Form: xx
Enter the number of reinforcing bars in the B face
of the columns INCLUDING the corner bars.
- 6.) ND (cc 19-20) Form: xx
Enter the number of reinforcing bars in the D face
of the columns EXCLUDING the corner bars.

G. FOOTING DATA (6 in cc 1)

The number six (6) in card column one is for identification
of the Footing Data.

- 1.) S (cc 3) Form: x
Enter the number 1 if a side view of the footing
is to be drawn. The default is that no side view will be
drawn.
- 2.) BF (cc 4-8) Form: xx.xxx feet
Enter the width perpendicular to the pier of the
footings in feet (No Default).
- 3.) DF (cc 9-13) Form: xx.xxx feet
Enter the width parallel to the pier of the
footings in feet (No Default).
- 4.) TF (cc 14-18) Form: xx.xxx feet
Enter the thickness of the footings in feet
(No Default).
- 5.) TRANS BAR (cc 19-20) Form: xx
Enter the Transverse Reinforcement Bar size
in the footing (No Default).
- 6.) TRANS NUM (cc 21-22) Form: xx
Enter the number of Transverse Reinforcement
bars in the footing (No Default).
- 7.) LONG BAR (cc 23-24) Form: xx
Enter the Longitudinal Reinforcement bar size
in the footing (No Default).

G. FOOTING DATA CONT.

8.) LONG NUM (cc 25-26) Form: xx
 Enter the number of Longitudinal Reinforcement bars in the footing (No Default).

9.) LONG T (cc 27) Form: x
 Enter the number 1 if longitudinal bars are on top of the transverse bars in the footing while looking at the front of the bent. The default is that the transverse bars are on top of the longitudinal bars in the footing.

10.) P (cc 28-29) Form: xx
 P is the pile footing option. Enter the type of pile as follows.

TYPE	PILE	TYPE	PILE
----	----	----	----
1	10 BP 42	5	14 IN. SQ. PSC
2	12 BP 53	6	16 IN. SQ. PSC
3	14 BP 73	7	14 IN. Metal Shell
4	12 IN. SQ. PSC	8	16 IN. Metal Shell

The default is that there are no piles in the footing. If there are no piles in the footing then go to the next line of input.

11.) NP (cc 30-31) Form: xx
 Enter the number of piles per footing (No Default). No input is required if the pile footing option is not selected.

12.) BP (cc 32-36) Form: xx.xxx feet
 BP is the pile spacing parameter measured parallel to the footing dimension BF. The pile layouts are shown on pages 11 and 12 to illustrate the positioning of the piles. Input BP in feet (No Default). No input is required if the pile footing option is not selected.

13.) DP (cc 37-41) Form: xx.xxx feet
 DP is the pile spacing parameter measured parallel to the footing dimension DF. The pile layouts are shown on pages 11 and 12 to illustrate the positioning of the piles. Input DP in feet (No Default). No input is required if the pile footing option is not selected.

H. BOTTOM OF FOOTING ELEVATION DATA (7 in cc 1)

The number seven (7) in card column one is for identification of the Bottom of Footing Elevation Data. There is one line of input for each Intermediate bent that is to be represented.

1.) FOOT 1 5 (cc 3-8, 9-14, 15-20, 21-26, 27-32)

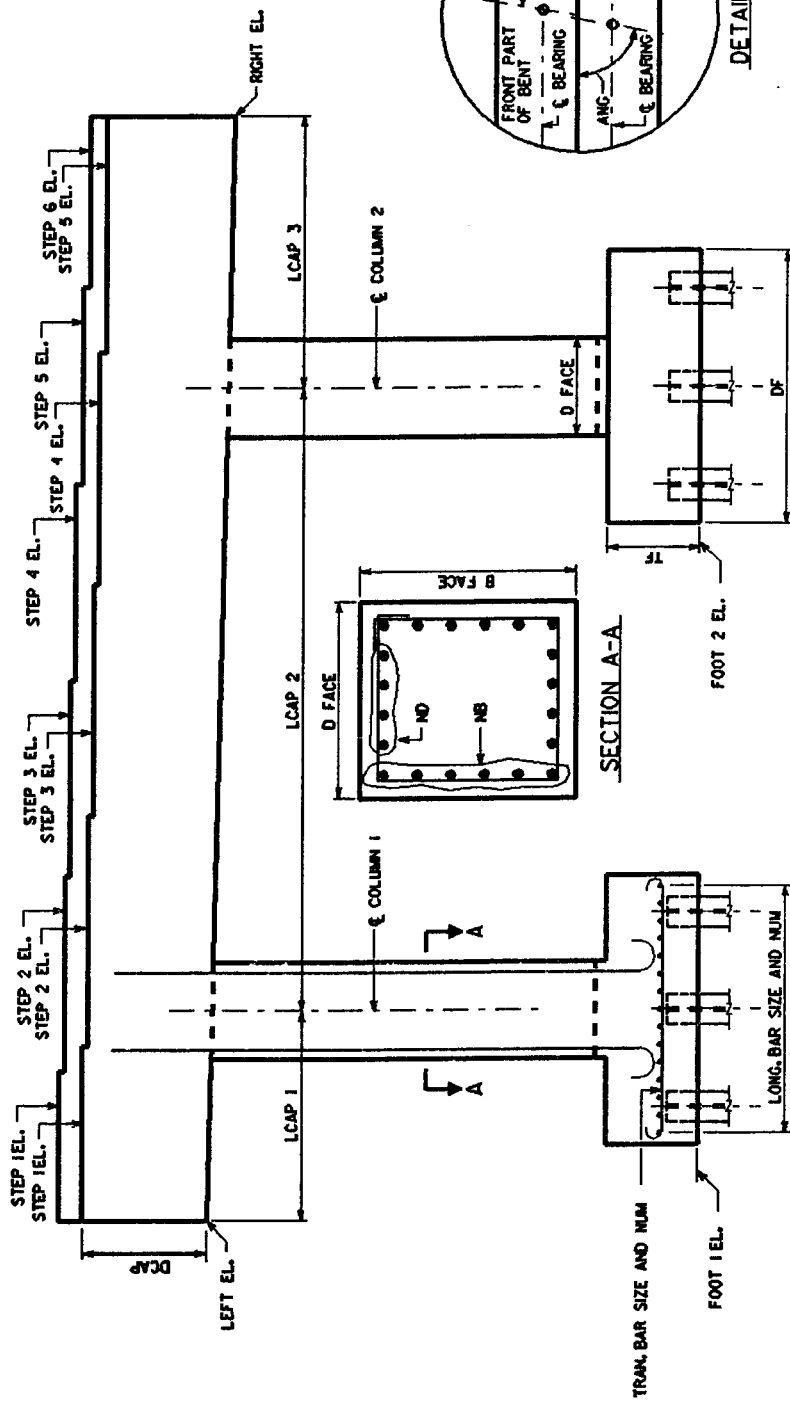

Form: xxxx.xx

Enter the bottom of footing elevations for each bent that is to be represented by the plot. If all footing elevations for a bent are the same, then only the elevation for FOOT 1 has to be entered.

6.0 HOW TO RUN BRIBNT

Before you attempt to run the program, insure that the input file has been created in node CCC as required. The program BRIBNT will run only in node CCC.

- To run the program (BRIBNT) in node CCC the user must be out of the graphics mode.
- When the user is in the dollar prompt mode, he may start the deck section program by typing

BRIBNT

- The program will prompt

```
Enter Input File:  
Enter Intergraph Output File:__.INT  
Enter Output Name For Concrete Quantities:  
Enter Output Name For Rebar Quantities:
```

- The Intergraph Output File must have the INT trailer so that the graphics conversion program can be run.
- The Concrete quantities will be per intermediate bent.
- The Output for the Rebar quantities is actually the input for the RBAR Quantities Program (BRRBAR). See the Quantity Discussion on page 16.
- When the program is completed the dollar prompt will appear.
- Run the conversion program that takes the INT File and creates the Graphics Design File (DGN) by typing

GATRANS

- The program will prompt

```
Enter INT file for graphics translation : filename.INT
```

This is a batch job and will take some time to create a graphics file called filename.DGN.

To check on the completion of the GATRANS program, type SH QUE to see if the batch job is completed.

7.0 QUANTITY DISCUSSION

A.) Concrete Quantities

The Concrete Quantity output will include the following:

- A listing of the input data.
- A listing of the Concrete Quantities per bent, broken down with the following data:
 - Cap
 - Columns
 - Footings
- A summary of the quantities per bent with a quantity summary.

B.) Steel Quantities

The output file for the steel quantities is actually the input for the Rebar Quantities Program (BRRBAR). This file can be edited or it can be used as is for the BRRBAR program. Since this file is in Node CCC the user must NET over the file to Node BBB so that BRRBAR can be run. The steel quantities are listed per bent.

The steel quantities will be incomplete for the cap portion of the intermediate bent. See Special Considerations on page 17 for further discussion.

8.0 SPECIAL CONSIDERATIONS

When running BRIBNT, the following special considerations need to be addressed :

- 1.) A bent with short columns or a graphics file created with 1/4 in/ft scale may have overlapping text.
- 2.) The steel is incomplete for the cap portion of the bent. The main reinforcement in the cap will have to be placed in the elevation view and in the cap sections. No bar numbers have been assigned to the main reinforcement or in the rebar quantities output file. The stirrup bars are given bar numbers in the cap sections but these bar numbers are not placed in the elevation view. The stirrup bars are listed in the rebar quantities output file but the total number of bars is not given.
- 3.) If the elevations for the back portion and the ahead portion of a bent at the first step varies by more than 8 inches then additional cap reinforcement will be placed in the highest portion. Two number 4 bars will be placed in the top corners and number 4 bar stirrups will be spaced at 12 inches along the bent.
- 4.) No provisions are made in the program for octagonal stirrup bars in the column or for double stirrup bars in the bent cap. These additional bars will have to be placed in the elevation view and the pertinent sections if they are required in the design.
- 5.) No more than 14 beams or 14 cap steps can run on this program. If more steps are needed the user can conform the input to give a close representation of the structure.
- 6.) The End Bent Graphics Program (BREBNT) should be used if a pile intermediate bent is required.

9.0 EXAMPLE PROBLEMS

The example problems consists of the following options:

- 1.) Example Problem 1 page 19
 - 1 column bent
 - symmetrical
 - rectangular spread footing
 - side elevation view of footing
 - elevations for 1 bent
 - steps are identical for front and back of bent
 - bearing at center of cap for continuous beams
 - anchor bolt holes
 - looking ahead
 - output listing of input and quantities

- 2.) Example Problem 2 page 25
 - 2 column bent
 - unsymmetrical
 - square pile footings
 - elevations for 2 bents
 - steps different for front and back of bent
 - dowel bar hole
 - looking back
 - output listing of input and quantities

- 3.) Example Problem 3 page 31
 - 3 column bent
 - symmetrical
 - square spread footings
 - elevations for 4 bents
 - steps different for front and back of bent
 - 13 beams on front and back part of bent
 - dowel bar hole
 - looking back
 - output listing of input and quantities
